# Dentures

Dentures that make your smile the most natural thing in the world.

While dental implants can offer the ideal solution for people with missing teeth, they may not be suitable for everyone. But that doesn't mean that you can't have great fitting, natural looking dentures that provide you with self-confidence and self-assurance.

At Dental 32 we offer innovative, superior fitting and highly aesthetic Bifunctional Prosthetic System (BPS) Dentures.

## What Does BPS Mean?

**Biofunctional:** The most important demand on your denture is to reproduce the functions of your natural teeth. The impressions and records for BPS dentures are taken in such a way as to make your bite as comfortable as possible, giving you new-found confidence during eating and speaking.

**Prosthetic:** BPS dentures are extremely high quality and only a small number of technicians are authorised to make your denture after thoroughly analysing your individual situation.

**System:** BPS dentures are made for specialised materials after excellent cooperation between myself and our specialist technician, using optimum analysis of your jaw shape and movements. This ensures the most natural and comfortable result possible for you.

## Superior Retention

The special impression and manufacturing techniques used in making BPS dentures mean that even lower dentures are held in place with superb suction without ever needing a fixative paste, something that is virtually unheard of using conventional denture techniques. This means the the lower denture is very unlikely to move about or get food lodged under it when eating.

## BPS can be used for

- ✓ Partial dentures for people that still have some of their own teeth remaining.
- ✓ Complete dentures for people that no longer have any of their natural teeth.
- ✓ Over dentures that are held in place using dental implants.

Your BPS dentures can be individualised to look more like your original natural teeth. This means, for example, that individual shades, shapes and stains can be used so that instead of just having white, regular, false looking teeth, your dentures can have a true to nature, individual appearance.

You can see the results in these before and after pictures of one of my patients. The result is natural looking teeth that radiate character and attractiveness. No-one could ever tell that your teeth are not all your own!

**Old Denture:** teeth have an unnatural 'denture looking' shape and there is no support for the upper lip.

**New BPS Denture:** teeth are completely natural looking and individual. There is support to the upper lip giving the smile a radiant, natural appearance

If you would like dentures that that don't look like dentures, contact our receptionists Marie and Sinead...
