A beautiful and confident smile

Get the smile you've always dreamed of with orthodontics at Dental 32

Crooked teeth can be a source of anxiety and embarrassment, resulting in loss of confidence and an unwillingness to smile. At Dental 32 the orthodontic treatment we offer will have a positive impact on your life, enabling you to smile with confidence!

Modern orthodontic braces can be used in an increasing variety of ways to straighten crooked teeth, correct crowded teeth, close unwanted gaps, or open spaces to enable dental implants to be placed, all in pursuit of the perfect smile.

Braces aren't just for teenagers

Although the majority of orthodontic braces are fitted to teenagers, increasingly more and more adults are enjoying the undoubted benefits of orthodontic treatment.

The Consultation Process

We normally carry out our in depth consultations over two visits. We listen to your wishes and concerns in order to get the best outcome for you.

At the first appointment information is gathered, impressions of the teeth, appropriate x rays and photographs are taken. This allows us to work with you to formulate the best possible treatment plan.

At the second appointment we will discuss with you your concerns and our findings from our first appointment. We will then decide with you your best options for treatment.

I felt my treatment was all discussed thoroughly with me before and throughout the 10 months. The outcome is absolutely amazing!

Amy

Clear Braces

Braces are no longer the 'Ugly Betty' train tracks you dreaded as a child.

Braces are no longer the 'Ugly Betty' train tracks you dreaded as a child. We use the highest quality clear ceramic InVu brackets and white arch wire which allows the braces to be very discreet.

They function in exactly the same way as metal braces but without you feeling self-conscious. Many of our patients tell us that no one notices they are even wearing a brace.

- No referral Required for consultation
- Treatment duration - from 6 months
- Procedure time – 30mins to fit brace. Pain free
- Virtually undetectable – very discreet
- Results – permanent if after care advice followed
- Price from £850

InVu

The perfect match for any patient

TP Orthodontics Aesthetic Brackets feature an exclusive Personalized Color-Matching Technology.

What does it do?

- Ceramic material closely duplicates properties of natural teeth
- Absorbs certain wavelengths of light, allowing only natural tooth color to show
- Creates look of transparency that matches virtually any tooth color

Lingual Braces

Don't want anyone to know you are having orthodontic treatment? We have the answer.

This type of brace is attached to the inside surfaces of the teeth rather than the front and is totally discreet. The brace is custom made to work in the shortest time possible while being completely invisible – no one will know it's there but you.

- No referral required.
- Custom made just for you by a specialist laboratory
- Treatment duration – from 8 months
- Procedure time – 45mins to fit brace. Pain free
- Completely undetectable
- Results – permanent if after care advice followed
- Price from £1200

Invisable Braces

With Invisalign, achieving the smile you always dreamed of doesn't have to be a big deal.

Invisalign straightens teeth using a series of nearly invisible, removable aligners that are custom-made specifically for your teeth. As you replace each aligner every two weeks, your teeth will move – little by little, week by week, gradually moving towards the projected final position.

- No referral required.
- Custom made just for you by a specialist laboratory
- Treatment duration – from 6 months
- Procedure time – A few minutes. Pain free
- Virtually undetectable
- Results – permanent if after care advice followed
- Price from £2500

NHS Braces

The most cost effective way of straightening teeth is with metal brackets.

Certain types of crowding in both children and adults can be treated under the NHS. We will advise you if this is possible at your second assessment appointment.

We use one of the brand leaders, American Orthodontics, which are among the most discreet metal braces available.

- Referral required from own dentist if not already a patient at Dental 32
- Consultation required for eligibility and treatment plan
- Treatment duration – approximately 12 – 18 months
- Procedure time – 30mins to fit brace. Pain free
- Results – permanent if after care advice followed
- Price £384 or free if exempt from NHS dental charges (please note not everyone is eligible for NHS braces as there is strict criteria to meet. Mr Wallace will advise you at assessment).

FAQ

Adult Orthodontics.

Do adults really get braces?

Absolutely! We treat many adults using orthodontics to resolve dental problems and improve self-confidence. It's never too late to have braces!

What does orthodontic treatment feel like?

Orthodontic treatment feels the same whatever your age. When the braces are initially fitted and after each adjustment, you may experience some discomfort. As the teeth begin to move they may ache slightly and it's not unusual for the teeth to feel slightly loose. Any discomfort can be easily treated using regular pain killers.

How do braces move teeth?

Braces apply light pressure to each tooth causing them to move. During the treatment, the orthodontist will periodically make adjustments or change the aligners to maintain the directional pressure required to continue the movement of the teeth.

How will braces impact on my oral health?

It is extremely important when wearing a brace that good oral hygiene is observed and maintained. At least one visit to the dental hygienist is often recommended.

What else can make a difference to my smile?

Having a bright and beautiful smile is something we all aspire to – after completion of your orthodontic treatment your smile can be perfected using tooth whitening or composite bonding.

Our Ortho dentist Robert Wallace BDS Dip Orth

Qualified from Queen's University in 1982 and has practiced locally since then, Robert has extensive experience in all fields of dentistry and since 1990 has developed a special interest in orthodontics. His main aim is to achieve great aesthetic results for his patients while working closely with them to provide lifelong confidence and a healthy smile.
